THOMAS DANIEL

Full-Stack Developer

td0864691@gmail.com | portfolio-olive-five-48.vercel.app | github.com/Niel-voss | Nigeria

PROFESSIONAL SUMMARY

Full-Stack Developer and Computer Science graduate with hands-on experience building and deploying web applications using Next.js, TypeScript, and PostgreSQL. Built Vendly, a live peer-to-peer marketplace, and developed a university RBAC portal featuring dynamic role management and audit logging. Interested in building secure, maintainable applications across the frontend and backend.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, HTML5, CSS3

Frontend: React, Next.js, Tailwind CSS

Backend: Next.js server-side development, API routes, REST APIs

Database: PostgreSQL, Prisma ORM, Neon

Authentication & Security: Auth.js, Google OAuth, Upstash Redis, role-based access control (RBAC), bcrypt, Zod validation

Tools & Deployment: Git, GitHub, Vercel, Cloudinary

PROJECTS

01 Vendly — A Student-to-Student Marketplace

Next.js · TypeScript · PostgreSQL · Prisma · Auth.js · Cloudinary

Live: vendlymarket.com.ng

- Built and deployed a peer-to-peer marketplace for the University of Benin community, supporting item listings and service offerings.
- Implemented Google OAuth authentication, listing management, search, user profiles, and Cloudinary-based image uploads.
- Developed real-time messaging with Pusher, including unread-message tracking and chat initiation from listing pages.
- Added server-side input validation, listing ownership checks, rate limiting, and reporting features to improve security and abuse prevention.

02 Dynamic Role-Based Access Control (RBAC) System

Next.js · TypeScript · Auth.js · Prisma · PostgreSQL · bcrypt

Live: rbac-project-flame.vercel.app | Source: github.com/Niel-voss/RBAC-PROJECT

- Developed a university portal with role-based access for administrators, lecturers, and students.
- Implemented dynamic role management through an administrative interface, with permissions enforced across protected application workflows.
- Built audit logging to record user actions, action details, and timestamps for accountability.
- Added a demo-mode credential helper to simplify project demonstrations and testing.

EDUCATION

Bachelor's Degree in Computer Science 2026

University of Benin (UNIBEN), Nigeria

PROFESSIONAL TRAINING

IGHub — SIWES / Industrial Training 2025

Completed introductory frontend development training in HTML, CSS, and JavaScript, then independently expanded into React, Next.js, and full-stack application development through continuous learning and project-based practice.
